

CONDITIONER #2

DESCRIPTION

CONDITIONER #2 is 70 percent active and designed to be added at tank side at very low concentrations. This helps to restore aqueous fluid systems to their original condition. CONDITIONER #2 eliminates built-up organic residues and odors. It reduces fouling of pipes and spray heads by reducing contaminants. We recommend that the system be cleaned and charged with fresh fluids whenever possible. Then, by following the recommended dosage, the system will again run free of these problems.

Fluid Type	Dosage (% by volume)	Dosage (gals/10,000 gal)	Length of inhibition (weeks)
Synthetic	0.07	7	up to 8
Semi-synthetic	0.07	7	4 - 8
Soluble oil	0.1	10	4 - 8

PHYSICAL PROPERTIES

Active ingredients:	70%	Flash point:	None
Density (lbs/gal):	9.75	pH @ 10% solution:	10.5 - 10.9

TOXICOLOGICAL PROPERTIES

CONDITIONER #2, in its concentrated form, is a severe dermal and eye irritant, but the effects can be greatly reduced by prompt washing with water. In its concentrated form, it may cause skin sensitization. However, at 0.05% no sensitization occurred.

STORAGE AND HANDLING

Store in a cool dry place. Do not store with strong oxidizing agents or concentrated acids. In case of contamination, do not reseal container.
